US

This course explores the effects of AI on what we study, how we study, and how students are assessed. It is designed for educators, support staff, policymakers, and students. It provides foundational knowledge, explores applications of generative AI in teaching and assessment, and delves into its implications for employability.

Upon course completion participants will be able to summarise how AI and generative AI function, understand their potential in higher education, discuss social and ethical considerations, and recognise their impact on employment and curricula.

Course materials are divided into two weeks of learning (estimated at 3 hours per week) and, in addition to the course content, feature vibrant discussions participants can contribute to.

## WHAT WE EXPECT

- full participation in tasks and meetings
- engagement with the material provided

## WHAT YOU GET

- a DIGI-FACE certificate after successful completion
- the opportunity to be part of a course on AI in Higher Education developed by Martin Compton and his team at King's College London

Ready to apply? Please apply via the online form here:

<https://www.digiface.org/application-forms/> Deadline for registration: July 12, 2024.
